Overview

This project is used to automate the process of file creation and retrial in a personal pc and it is also compatible with other applications if you wanted to do in the future.

Goals

1. Automate the file manager.
2. Easy to use anybody can use this application and increase its productivity.

Specifications

There are several steps to keep in mind before going touse this code in their machine first the path for the file must be checked and edited accordingly then first create some files inside that folder so that you can check whether its all properly set up or you need to di some correction in ti. after this you can use freely this application and no nee to think about any bugs and I will keep updating the code so that you ill get the latest application and more functionality within.

Unique Sellin Point

I. Any Body can use this application

Anybody can use this simple application and they can easily modify it according to their needs and this makes this application more versatile and adaptive.t.

II. App Compatibility

In the Future, you can get more fun nasty in this and you can use this in other applications as well using his API and we are currently working on that soon you will see them.
